Special Scientific Report--Fisheries are preliminary or progress reports and reports on scientific investigations of restricted scope. Established as Special Scientific Report in 1940, nos. 1 to 67 were issued from that date to 1949, when the new series, Special Scientific Report--Fisheries, with new serial numbering, was started.

Special Scientific Report--Fisheries are distributed free to libraries, research institutions, State agencies, and scientists.

# Annotated Bibliography of Zooplankton Sampling Devices

By

JACK W. JOSSI, Oceanographer

Bureau of Commercial Fisheries  
Tropical Atlantic Biological Laboratory  
Miami, Fla. 33149

## ABSTRACT

The bibliography gives references to publications issued since 1873. It has information on many characteristics of these devices. The references are listed by author and by KWIC index.

## INTRODUCTION

The bibliography presents references to articles on zooplankton sampling devices which have been published since 1873. It has information on the description, performance, deployment, comparative catching ability, and hydrodynamic characteristics of the plankton devices. I have omitted references to devices for the manipulation and processing of plankton samples such as splitters, counting dishes, and zooplankton volumetric apparatus.

Most of the entries refer to published articles. References to unpublished papers, foreign-language papers with translations, and papers difficult to obtain are annotated to aid the reader. References that were not originally printed in the Modern European alphabet have been transliterated. Despite a careful literature search, certain omissions are bound to occur, particularly in the case of untranslated papers, or those occurring in obscure journals.

## INDEXING SYSTEM

The Keyword-in-Context (KWIC) indexing system (International Business Machines Corporation, 1962) used in this bibliography provides convenient and rapid retrieval of pertinent articles, as well as an easy method of updating the bibliography at periodic intervals. The bibliography consists of three parts. First, bibliography made up of all articles indexed, arranged alphabetically according to the last name of the author (first author mentioned when there are more than one). Second, the Keyword-in-Context (KWIC) index, which consists of an alphabetical listing of significant words and phrases in the titles

and annotations and including the words by which they are surrounded. Each KWIC index entry is accompanied by an accession number located at the right-hand margin. Reference to that number in the bibliographic entries provides the complete reference and its annotation. Third, a list of all journal titles as abbreviated in the bibliography, each followed by the title written out in full.

To illustrate the use of the bibliography, suppose one is interested in papers dealing with the filtration efficiencies of the Indian Ocean Standard Net. Pertinent references will be found by scanning the KWIC index under FILTRATION, EFFICIENCIES, and INDIAN OCEAN STANDARD NET. The accession numbers to the right of each key word are then used to locate the complete reference in the bibliography.

The IBM printer used to prepare the bibliography has a limited number of typographic characters. The following set of symbols was therefore, substituted for certain missing characters:

<u>Symbols</u>	<u>Definitions</u>
./.	Indicates end of title when additional key words have been added. (The additional key words follow the virgules.)
.-	Indicates the end of title without additional key words.
.*	Colon.
„	Quotation mark.
.,	Semicolon.
,	Apostrophe.
/	Parenthesis.

## NOTE

The reader's attention is called to a valuable publication whose issuance was too late to be included. It contains reviews of zooplankton sampling prepared by experts in the field and also references to some papers omitted from this bibliography. This publication is:

UNESCO.

1968. Zooplankton sampling. UNESCO-Monogr. Oceanogr. Methodol. 2, 174 pp. [available from: UNESCO, Place de Fontenoy, 75-Paris-7<sup>e</sup> France].

## ACKNOWLEDGMENTS

Julius Rockwell, BCF (Bureau of Commercial Fisheries), Arlington, Va., let me use

his encyclopedia of oceanographic instruments; Allan Child, Smithsonian Institution, Washington, D.C., provided many hard-to-find papers; Albert C. Jones, Conrad Mahnken, Raissa Maurin, and the secretarial staff of the BCF Tropical Atlantic Biological Laboratory, made many valuable suggestions and reviewed and aided in the preparation of the bibliography. The staff of the Computer Center, Institute of Marine Science, University of Miami, processed the references and made the machine runs.

As the Nation's principal conservation agency, the Department of the Interior has basic responsibilities for water, fish, wildlife, mineral, land, park, and recreational resources. Indian and Territorial affairs are other major concerns of America's "Department of Natural Resources."

The Department works to assure the wisest choice in managing all our resources so each will make its full contribution to a better United States -- now and in the future.
